

WEEKLY PROBLEM

EXERCISE.

Let $n \geq 2$ be a positive integer and λ a positive real number. Initially there are n fleas on a horizontal line, not all at the same point. We define a move of choosing two fleas at some points A and B , with A to the left of B , and letting the flea from A jump over the flea from B to the point C such that $BC/AB = \lambda$.

Determine all values of λ such that for any point M on the line and for any initial position of the n fleas, there exists a sequence of moves that will take them all to the position right of M .
